

```

protected void successfulAuthentication(HttpServletRequest request,
    HttpServletResponse response, FilterChain chain,
    Authentication authResult) throws IOException, ServletException {
    SecurityContext context =
        this.securityContextHolderStrategy.createEmptyContext();
    context.setAuthentication(authResult);
    this.securityContextHolderStrategy.setContext(context);

    this.successHandler.onAuthenticationSuccess(request, response,
        authResult);
}

```

RESTful Stateful Session tracking is not recommended

```
public String generateToken(UserDetails userDetails) {
```
